

R12922173 胡耿銘

先下載CNN from app store then do something and record it.
接著到label studio去拿到標註的raw_data

```
terminal Help
{} video.json x
HW1_A > code > {} video.json > ...
1 [{"id":1,"annotations":[{"id":1,"completed_by":1,"res
```

raw_data長上面這樣 接著自己寫一個modify.py把它變指定格式

```
terminal Help
{} annotate.json x
HW1_A > {} annotate.json > [ ] 1.mp4 > {} 0 > [ ] down_coordinate > # 0
1 {
2     "1.mp4": [
3         {
4             "start_frame": "13",
5             "end_frame": "48",
6             "action_type": "click",
7             "down_coordinate": [93,8],
8             "up_coordinate": [93,8],
9             "type_word": null
10        },
11        {
12            "start_frame": "56",
13            "end_frame": "73",
14            "action_type": "click",
15            "down_coordinate": [17,15],
16            "up_coordinate": [17,15],
17            "type_word": null
18        },
19        {
20            "start_frame": "129",
21            "end_frame": "165",
22            "action_type": "type",
```

像是這樣
